Subject: RE: Checking in on the Chloroprene RFC

Kris,

A few more questions please.

Did the new reviewer (Hsieh) get the same documents as the rest of the second-round team? What instructions was he given, seeing as how he was not part of the original group of reviewers?

Yes. The peer review focused on the documents associated with [RFC 21005](#) submitted by Denka to EPA. EPA provided all materials associated with [RFC 21005](#) to the peer reviewers. All materials associated with [RFC 17002/RFR 17002A](#) were provided to the peer reviewers as background.

Can you provide feedback on how EPA's work with Denka and Ramboll did not constitute a QA review as described on page 4 of the letter? "Importantly, while EPA provided feedback on quality assurance, EPA does not consider these discussions to constitute a formal quality assurance review, as the discussions alone did not satisfy the QA requirements outlined in the Quality Assurance Project Plan (QAPP) for Dosimetry and Mechanism-Based Models developed by the U.S. EPA's Office of Research and Development (U.S, 2020b)."

Suggest scrolling through the QAPP by clicking on the citation link and then downloading the report. You can see there is quite a bit of formality in the components of the technical review and documentation that go well beyond the EPA feedback provided previously.

Can you provide the basis for the calculation shown in the letter on page 5? "Overall, the U.S. EPA concludes that even if the current Ramboll PBPK model were accepted at face value and applied to the extent possible, the *total* estimated cancer risk would be reduced by no more than 50%."

The language below from pages 6-7 of the response summarizes the basis for EPA's overall conclusion:

"Ramboll's analyses assert that the risk of human lung cancer is minimal compared to mice, making the current IRIS IUR an overestimate of risk. EPA has not undertaken the technical analysis to reach a conclusion on concurrence with this assertion. But, if accepted at face value, the lung only accounts for about 40% of the total cancer incidence in mice (National Toxicology, 1998). Since the existing Ramboll model cannot be used to address risk in other tissues, the same standard inter-species scaling as used in the 2010 IRIS Toxicological Review would need to be applied to estimate cancer risk for those other tissues. Overall, the U.S. EPA concludes that even if the current Ramboll PBPK model were accepted at face value and applied to the extent possible, the *total* estimated cancer risk would be reduced by no more than 50%. This factor of 2 difference is well within the generally accepted uncertainty for cancer risk estimation. Hence, EPA concludes that the 2010 Toxicological Review did not over-estimate the human cancer risk by multiple orders of magnitude, as contended by Denka and Ramboll."

Thank you.

THINK SECURE. This email has come from an **external source**. Do not click on links or open attachments unless you recognize the sender.

Patrick,

The background document referenced is from the 2020 peer review ([Background Description for Chloroprene PBPK Modeling July 2020 \(U.S. EPA, 2020\) \(PDF\)](#)). The URL to the first peer review is https://cfpub.epa.gov/ncea/iris_drafts/recordisplay.cfm?deid=349015.

The questions provided to the reviewers are verbatim included in the peer review report that was attached in the prior response. EPA provided the peer review contractor all the documents associated with RFC 21005 submitted by Denka to EPA. EPA also provided the peer review contractor documents associated with [RFC 17002/RFR 17002A](#) as background. No other documentation was provided.

Hope this clarifies,

Kris

Kris,

What exactly is the "Background for the Peer Review" document?

And were the charge questions provided as written in the second round report? Can you provide them to me as they were provided to the peer reviewers? Were there any other documents provided to the peer reviewers in addition to the charge questions? If so, can you please provide them?

Thanks,

Patrick,

The charge questions for the second round of review starts on page 3 (or page 5 of 79) of peer review report (attached).

Note that many of the charge questions were repeated (with minor edits) from the original charge questions. If I understand your comment, then I think(?) that is the context for citing the "Background for the Peer Review" document in the charge questions (excerpt below). We did not provide EPA analyses for this second review engagement. But, let me know if you are referring to a different context for citing the background document.

Overall PBPK Model Soundness and Applicability

Model-predicted doses in model tissue compartments corresponding to tissues in which neoplasm were observed in the rat and mouse bioassay, with corresponding cancer incidence for 80 ppm chloroprene inhalation exposure, are provided in the EPA background document. In potential application to human health risk assessment, the relative risk of tumors in human liver and lung will depend on the relative rate of metabolism predicted in those tissues, compared to the mouse or rat (as well as the relative rate of clearance). Estimation of risks for tissues other than liver and lung could depend on the relative estimates of chloroprene venous blood or tissue concentration. An evaluation of the model's applicability and degree of uncertainty should consider both the absolute model predictions (i.e., does the model accurately predict the absolute rates of metabolism and blood/tissue concentrations in each species?) and the ability to predict the relative rate of metabolism or relative concentration in human vs. rodent tissues, though some inaccuracy in the absolute values may exist. See "Background for the Peer Review" document for additional context.

A couple more requests:

It appears that EPA treated this second round of comments as a new peer review. Is that true? Can you please provide the original charge to this group of reviewers, including any background documents USEPA provided them in preparation for the peer review?

Also, the document mentions a "Background for the Peer Review" document on page 8. What document is that referencing, and could you please supply it?

Thank you

Bob,

I was just looking at our RFC page at epa.gov and a letter has been posted there denying the RFC. A couple of questions:

1. It still says "draft" at the top of every page. Is this in error and the letter is not final? If so, why has it been posted?
2. If the letter is final, why was no communication made to me directly as the submitter?

Please let me know the answers to these questions as soon as you can. Thank you.

Hi Patrick,

We have yet to hear back from OMB. Depending on their workload and the complexity of the RFC response it sometimes takes a while.

As soon as I receive the OMB review and comments, I will forward them to the Information Owner for inclusion in the response. The response will be finalized and sent to you by the Information Owner.

Best regards,

Bob

Hi Patrick,

I have been in contact with the information owner and have not yet received the draft response. Once I receive the draft response, EPA will forward it to OMB for their review.

Thank you for inquiring,

Bob

Good morning Patrick

The information owner has taken the time necessary to give your request a thorough review. The draft response is now with the information owner's senior management for review. I should have a response from them by next week. Once my management completes their review, we will need to send the draft response to the Office of Management and Budget (OMB) for their review and comment. OMB comments will be incorporated into the final response prior to management signature and sending to you.

I anticipate the entire process from this point should take another couple of weeks. I will keep you posted as the process moves along.

Please let me know if you have any further questions.

Regards,

Bob

Hello Bob,

I'm checking in to see if the Agency has completed its review of our RFC. As I'm sure you are aware, we are very interested in the Agency's response, and were expecting it today. Please advise. Thanks!

Hi Patrick,

The information owners are still reviewing the RFC. There is no update and there have been no questions.

Best Regards,

Bob

Hi Bob,

Well, it's been 2 months since I submitted the chloroprene RFC, about halfway through the projected review period, so it seems a natural time to check in with you all. I wondered if you could provide a brief status update on how you all are proceeding with the review? Have any questions cropped up that we can answer for you? We are available to do that at any time if you or anyone else needs us.

Hoping this message finds you well and looking forward to any information you can provide. Thanks!
